

We've got you covered.

STEP 1

Print out this handy PDF on 8.5x11" paper, 100% to scale. Double check that our key measures 1" to make sure your print settings are correct and the document printed out to scale. Otherwise the stone sizes will not be accurate.

STEP 2

Cut out the stones you're interested in and try 'em on!

KEY

Ensure this key measures 1" x 1" after printing for the most accurate measurement. Please note that due to printer variations, we can't guarantee that the sizes will be accurate if the key measurement is not 1".

TRY ON

Test multiple sizes and shapes on your hand!

Please note that this guide is made for diamond carat weights. Every diamond is a slightly different size, even at the same carat weight, especially elongated diamonds which come in a variety of length:width ratios, so all representations are approximate. Please see page 2 for stones measured by the millimeter (moissanite and lab gemstones).
